

PRODUCT SPECIFICATION

ABUS 20 Series Diskus Padlock

Our most secure Diskus padlock for high security requirements with a shackle made of hardened special steel. With a stainless steel internal mechanism and outer case it is suitable in outdoor conditions. A rotating key guard prevents force applied to the lock barrel and helps to keep water and dirt from entering the mechanism. Remember that all discus padlocks are designed to be 'key-retaining' for security reasons and therefore will only release the key once the padlock is re-locked.

An additional feature which makes this a superior option to many other disc padlocks is the reinforced plate within the body, preventing the lock body from being cut or force attacked.

This lock uses a patented ABUS Plus mechanism with over 250,000 different key variations. It is near impossible to pick and drilling the mechanism will not allow the lock to open.

Each lock is supplied with 2 keys, one of which has an integrated LED light. They keys cannot be copied without the special code card which is supplied with each lock.
