

PRODUCT SPECIFICATION

ABUS 130 Granit Hasp & Staple

As a high security hasp it is much more secure than the majority but not as secure as our top-end Granit version which is CEN approved.

It has a number of additional features that make it much stronger than a standard hasp & staple. For example extra strong hinges and secure banking plates make physical attacked more difficult. A hardened steel staple makes it highly resistant to hack-saw attacks.

All coach bolts and fitting are included with the product but some doors may require a degree of retro-fitting with additional tools or bolts.

Hasp Sizes & Details:
